Read the passage below carefully and choose the correct answer A, B, C, or D:

In the future, maybe all cars that run on petrol will be replaced by solar cars, which have been around for a while, but with recent developments in solar car design and the measurement of photovoltaic cells becoming smaller, the dream of a truly efficient solar car is more reality than fantasy. A solar car is a vehicle powered by photovoltaic cells, also called solar cells, which convert sunlight (light energy) into electrical energy. As a source of

energy on earth, there is nothing like the sun: in a mere one thousandth of one second (.001), the sun emits enough energy to fulfill our planet's energy needs for the next 5,000 years. It is a staggering fact, and an exciting one. Since the energy from the sun is responsible for renewable resources such as wind, tides, and heat, solar energy seems to offer the brightest future for not only cars, but for the entire energy crisis. Despite the appearance that solar energy may be the least feasible among the current crop of alternative fuel propositions, new solar powered devices and more specifically solar powered cars are beginning to be developed. How do Solar Cars work?

The photo-voltaic cells absorb photons from sunlight. This action generates heat, which the cells then convert into electrical energy and stores in an on-board battery. This process of conversion is called the photovoltaic effect. Not surprisingly, such a vehicle has zero emissions, and is very environmentally friendly. Unfortunately, at the moment photovoltaic cells are extremely inefficient, yet as time progresses the efficiency of these cells will grow. This will make solar energy and solar cars the fuel and car of the future—a closer reality.

46. According to the text,

- A. up to now, we have designed some solar cars
- B. solar cars have been very popular for many years
- C. we have not produced any solar cars yet

- C. photovoltaic cells
- D. electricity

48. Which can not help us to solve the problem of energy crisis?

- A. wind from the moon
- B. tide
- C. the sun
- D. heat

49. According to the text,

- A. no powered solar devices have been developed so far
- B. besides solar car, we have also developed solar powered device
- C. solar energy plans are more feasible than wind energy plans
- D. tide can supply more energy than the sun

50. The photovoltaic effect is

- A. the process of operating a solar car.
- B. the process of absorbing photons from the sun.
- C. the developing of solar cars and solar powered devices.
- D. the converting of heat from the sun into electricity.

Read the passage carefully and choose the correct answer.

Today, in many parts of the world, it is customary for people to shake hands upon meeting as gesture of good will. Originally, however, the practice of shaking hands had a more practical purpose.

Shaking hands originated in medieval times. In those days, when a man came on a stranger, he would often automatically reach for his sword with his right hand, in case he had to use the weapon to defend himself. Sometimes, both parties found themselves circling around each other, weapons in hand, until it was mutually agreed that the weapons could be laid aside. Then, the two parties extended their right hands to show they had no weapons, and clasped them. This was the beginning of the handshake. [clasp: xiết chặt]

The custom of shaking hands is not a universal one. In the Orient, people have, for centuries, clasped their own hands in front of them upon meeting to show that they held no weapons. Vietnam is a densely-populated, developing country that in the last 30 years has had to recover from the ravages of war. Substantial progress was achieved from 1986 to 1997 in moving forward from an extremely low level of development and significantly reducing poverty.

Since 2001, Vietnamese authorities have reaffirmed their commitment to economic liberalization and international integration. They have moved to implement the structural reforms needed to modernize the economy and to produce more competitive, export-driven industries..

Vietnam's membership in the ASEAN Free Trade Area (AFTA) and entry into force of the US-Vietnam Bilateral Trade Agreement in December 2001 have led to even more rapid changes in Vietnam's trade and economic regime. Vietnam's exports to the US doubled in 2002 and again in 2003.

Vietnam joined the WTO (World Trade Organization) in January 2007, following over a decade long negotiation process. This should provide an important boost to the economy and should help to ensure the continuation of liberalizing reforms.

Vietnam is working to create jobs to meet the challenge of a labor force that is growing by more than one million people every year. Vietnamese authorities have tightened monetary and fiscal policies to stem high inflation. Hanoi is targeting an economic growth rate of 7.5-8% during the next five years.
